INTRODUCTION

Innovative blockchain technology creates unique opportunities for functioning in any sphere of modern society. Initially, the decentralized data storage system was used just for creating cryptocurrencies and their mining. Its distinguishing feature is the organization of the process without intermediaries.

But now the safety and transparency of this technology have allowed it to penetrate into any industry where there is a risk of errors in the process of transferring information or the risk of fraud.

The blockchain has found its fans even in the gambling and game industries, which is a vivid example of not only the infinite possibilities of technology, but also of rich imagination of crypto-enthusiasts.

The gaming business is one of the most profitable markets with an annual turnover of more than \$50 billion, and the advent of blockchain technology and cryptocurrencies changes the market and began its growth. To date, the entire global gambling market is estimated \$500 billion dollars. Vast competition has led to the creating of decent playgrounds. Therefore, some online casinos offer various bonus and referral programs to attract more players.

MARKET PROBLEMS

1. Government bans on online gambling

In the United States, as in many other countries, federal gambling legislation exists for many years, and in particular, bans on all kinds of gambling entertainment using the global network.

The global financial crisis has greatly dent the economy. Lots of disputes between supporters of gambling and its opponents ran high In federal government structures. Two parties wanted game legislation to be overviewed.

A hindrance to the implementation of the creating of gambling clubs can be in the form of the problem of finding investors who can invest their financial capital in this project, and in regards to visitors or players, the authorities are confident that there are no difficulties to attract them. For a long time it is not a secret that all over the world there are a lot of people who want and continue playing cards. There are also entire clubs of amateur and professional poker players, both real and in the global network. Although, such games are also treated to the gaming industry and are on the ban list.

Many opponents of gambling believe that poker, like slot machines, causes enormous damage not only to the country's economy, but also to the financial well-being of individual citizens. However, supporters of card gambling express the opposite opinion and give rather convincing arguments.

Government agencies strictly regulate both the service providers of the gambling industry and the players. Licenses, certificates, various taxes which go into state revenue and are taken from the pockets of casino visitors and players on online resources.

2. High and non-transparent commissions of online platforms

The fact that many players are not familiar with blockchain technology, and operators play a leading role in educating players, leads to large or not-transparent commissions on online platforms. Players are forced to pay commissions when crediting funds to their personal accounts, as well as using the internal rate of a bank or online casinos for mutual settlements, losing up to 10% of the funds paid.

3. Banking restrictions and transaction rates

Strict regulation of offline and online gambling sites also implicates a ban on financial transactions made by banks or other payment systems in favor of online casino operators and slot machines. After sending funds to the player's personal account, the user loses control over their assets. The existence of a law prohibiting the creation of gambling platforms requires a huge amount of verification by the state, which leads to the fact that transactions for depositing funds and withdrawing winnings do not only take a lot of time, but may also not be carried out or blocked. Also, the problems of strict regulation by the state include the requirements for passing the KYC procedure or sending of additional sources of income.

4. High taxes

Tax services for more than a dozen years are guided by these or other rules, charge taxes from online players. Another problem is operators. Poker networks are forced to obtain expensive licenses in regulated areas and pay huge taxes annually. Of course, this is also reflected in those who play in these networks: as for us, this leads to rake grows, VIP programs are reduced, etc. And this, in turn, is not the main, but a very significant reason for the decline of online poker's popularity. The state holds up to 40% of the winnings with the legalization of funds. Below is a list of some countries with their own retention rates.

Canada - 40%

Portugal - 30%

France - 30%

Belgium 25-40%

Greece - 20%

Ukraine - 15%

Russia - 13%

Belarus - 12%

5. Frauds with RNG

Media periodically publish materials about scandals in the online gambling industry. The most popular machinations are the spinning of the random number generator (RNG) by online casino software providers, manipulations with Jack Pot, which make the JackPot probability impossible, non-payment of progressive JackPots, collusion in the administration of resources with affiliated players.

BENEFITS OF USING BLOCKCHAIN AND CRYPTOCURRENCY

The online gambling industry is constantly accused of fraud and deception not only from the side of players, but also from investors, businessmen, and state. Such situations lead to the ruin and closure of online platforms. For example, in the United States in recent years, dozens of global online gaming platforms have been closed, what has led to the loss of players' deposits, estimated at millions of dollars that are not returned to users yet.

The appearance of blockchain in this market has led to the solution of these problems and the realization of the huge potential of online games. At the moment, blockchain has the following advantages:

- **No transaction fees.** To use the system, the player creates a wallet, and regardless of the currency he uses, immediately after recharging his wallet, money is available to a player without any time expenditures.
- **No amount limits.** Cryptocurrencies provide an ability to transfer any amount of money anywhere in the world. For example, you cannot transfer a million dollars from a traditional bank card at a clip, but in the crypto industry you have this opportunity. In the world of gambling, this fact plays an important role, because bets and winnings are valued at tens and hundreds of thousands dollars.
- **Secure assets storage.** The main advantages of cryptocurrency are security and decentralization. Your funds do not transfer through banks that have the right to block or take them away. Your funds are not held by third parties.
- **No payment delay.** Many payment systems set a payment delay period from a plastic card in order to be able to cancel a transaction that was not created by a person. Cryptocurrencies solve this problem providing you with fair payments.

Myths about transactional delays in the world of cryptocurrency have been dispelled. Modern technologies and the huge variability of cryptocurrencies allow you to quickly deposit and withdraw large amounts of money.

Cryptocurrency in the gaming industry provides users with transparency, security and ease of processing all financial transactions. Blockchain, in turn, is aimed at the convenience of the game platforms developers. Its benefits include:

- **No need to create a player account on online platforms.** All transactions go directly from player's wallet. The operations are instant and do not depend on third parties.
- **Honesty.** Blockchain ensures the transparency and honesty of the game process, and cryptocurrency acts as a safe payment mean.
- **Independent tax regulation.** Each user decides whether to legalize funds to the tax authorities of the country or no.
- **Anonymous transactions.** Personal crypto wallets do not require verification and identity verification. The user makes private transactions in blockchain.

With the advent of cryptocurrency and blockchain in the gaming industry, players' interest in traditional centralized platforms has disappeared. Players' demand for privacy, anonymity, honesty, transparency, accessibility, the appearing of new solutions became a push to emerge honest, blockchain-based gaming platforms.

TRON NETWORK

Tron Network is an ambitious project dedicated to the creation and development of decentralized Internet and its infrastructure.

The Tron protocol is one of the largest in the world; its universal methods provide accessible support for blockchains, which contributes to high output, scalability and availability. Thanks to such a way of solving problems, Tron is considered to be a unique platform with the ability to connect any decentralized applications (DApps) and ensure their effective operation. Today TRON blockchain's cryptocurrency TRX is ranked 10th in the world in terms of its capitalization – more than 2.6 billion US dollars.

Key features of the Tron Network are:

1. High network bandwidth

According to TRON consensus, high output is achieved due to the limited number of nodes with high computing performance. Thanks to this, TPS (transaction per second) of the entire network is at a high level. Thanks to a chain of unique solutions, the concept of the Tron system surpassed other systems, such as Bitcoin and Ethereum. The current average performance is 2000 TPS. The planned way of the system development of will led to the increase of this number up to 10,000 TPS. High TPS rates guarantee low payment delays and fast transaction speeds along with other payment systems, such as Visa and Swift, which ensures daily payment.

2. High availability

All members of the Tron platform are interested in creating a unique decentralized mechanism. The higher level of decentralization, the more reliable will be the user assets, network structure and internal values.

Despite this, the Tron consensus mechanism is much more energy efficient than other modes, such as POW.

3. Low cost

Due to the structure of low cost computing, developers of various applications on Tron have an opportunity to expand their user base and increase commercial competitiveness. A user can freeze the TRX cryptocurrency on the Tron Network and, having received the energy in the network, make transactions absolutely for free.

Tron and its various subsidiary decentralized applications (DApps) do not just reduce user costs, but also increase convenience in everyday life and financial returns.

By expanding their DApps on Tron, developers can increase their activities and promote their values and beliefs.

No matter if a person is a user or a developer, everyone devotes himself to the creation and prosperity of the Tron ecosystem and receives a reward for his actions.

ABOUT TRONBOMB

Tronbomb.com is a socially oriented, decentralized and fully transparent platform based on the Tron Network blockchain. The main goal of TronBomb is to create a platform that includes all the advantages of blockchain technology and takes into account current market problems and disadvantages of competing platforms. Thus, this project aims to change the existing ways to gameplay realization and to make this process more enjoyable, affordable and beneficial for players and users of the platform.

The TronBomb platform provides interest not only to crypto enthusiasts, but also to players and token holders who own the platform. Platform profits are distributed transparently among all token holders using smart contracts.

TRON gaming platform has instant winnings and playing directly from the user's wallet. As a bonus, players receive dividends every 24 hours. Dividends are calculated in the TRX cryptocurrency, which is traded on the world's largest exchanges. The release of tokens is limited to the amount of 100,000,000 (one hundred million) and don't have additional emissions.

The main features of the project TronBomb include:

1) **Platform Dividend Model**

All funds received by the platform as a profit form a dividend pool and are distributed among project token holders.

Distribution of funds from the dividend pool is conducted by a smart contract every 24 hours. In the DIVIDENDS section on our website you can see a countdown timer till the next allocation of funds.

2) **Socialization of the platform:**

The ranking system allows users to increase their level in the system depending on the amount of bets made.

Online chat helps users discuss game strategy, project development, and expand, strengthen the TronBomb platform community.

Multiplayer games will add a lot of emotions and increase involvement in the gameplay.

Transparent | Easy to use | Infinite dividends |
<http://tronbomb.com>

A multi-level referral system will allow platform promoters to receive high rewards, attracting new users and players to increase their winnings.

3) **Jackpots system:**

- 5 largest players will receive a reward every 24 hours for the volume of their bets
- An arbitrary bonus will be received by 20 lucky platform users every 24 hours.

4) **Auction system**

Part of the dividend pool funds is transferred to the auction fund and is available for purchase for project tokens by auction participants.

Cryptocurrency projects, releasing their token, in 95% of cases forget about the economic component of the token (tokenomics) and support for token holders. Another distinctive feature of the TronBomb project is a well-thought tokenomics:

- Playing on the platform not just for cryptocurrency TRX, but also for project tokens. Platform-derived tokens are burned, reducing the total number of tokens in circulation.
- All tokens obtained as a result of auctions are burned
- The system of token buyback and burning. To reduce the total number of tokens in circulation and increase its liquidity, the project team will carry out the buyback of tokens on exchanges with subsequent burning. Information about purchased and burned tokens is available in the appropriate section.

All these measures are aimed at supporting the token and the project as a whole, as well as providing players and users with additional bonuses.

TRONBOMB PLATFORM FEATURES

The main goal of the TronBomb platform is to expand multiplayer games to increase user socialization and maximize the entertainment component for all participants. At the moment, the number of platforms using and developing multiplayer games in this sphere is extremely small. We want all participants to have an opportunity to enjoy playing together. To increase the competitive component, we plan to introduce a system of ranks and bonuses.

A multi-level referral system will let the participants make a profit, improving the social aspect of the platform. For the convenience of communication, we will launch gaming online chat, where each participant will be able to share his experiences with newcomers.

In addition to the dividend system, all users of the platform will be able to get an additional profit, thanks to the variable jackpots system. It is planned to introduce several types of jackpots.

Jackpot will be distributed randomly for a certain period of time among all users of the platform.

All participants who have completed certain tasks in terms of gaming bets volume will be able to participate in Jackpot which will be organized by the developers.

MINING

As a nice bonus for players, Tronbomb.com is to provide users with an opportunity of obtaining additional profit due to several parameters:

Mining BOMB Token

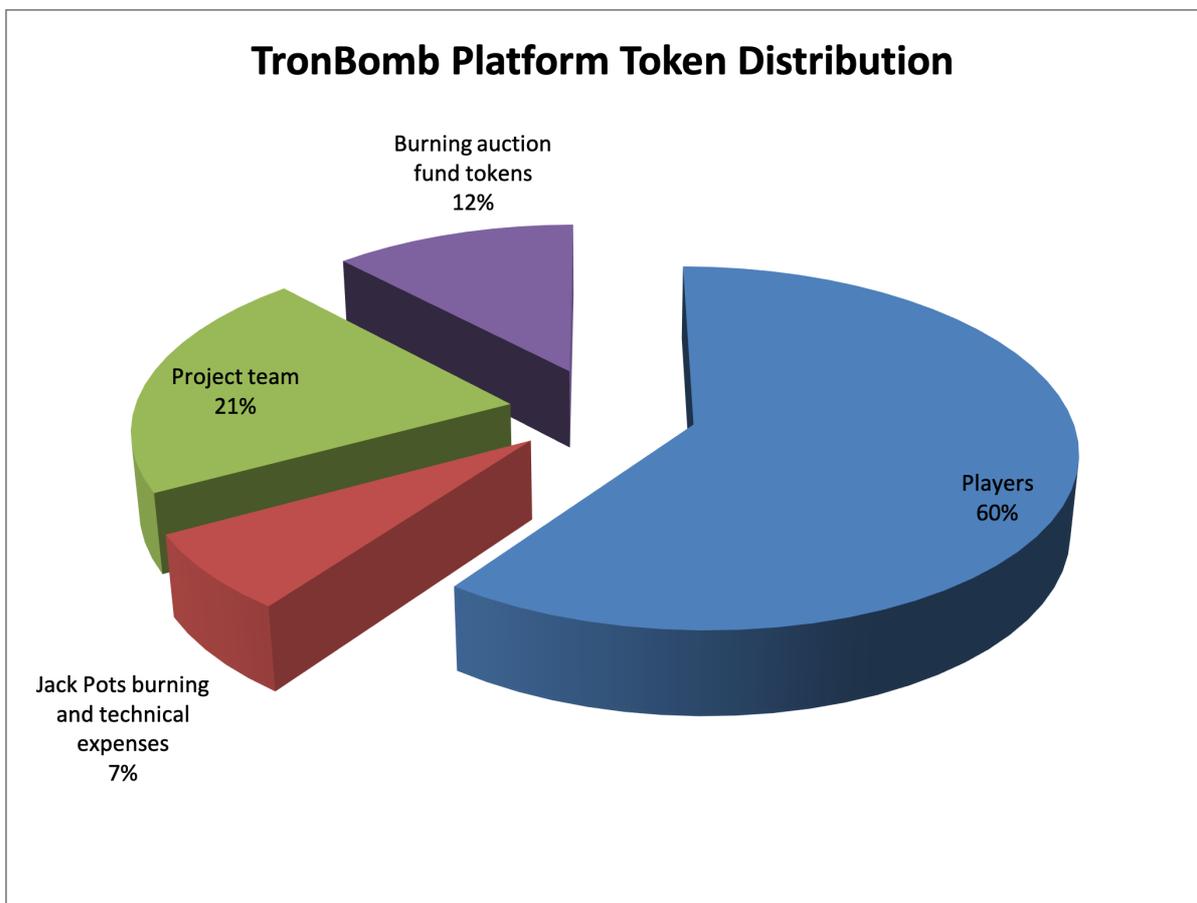

Fair dividend system

Auction dividend system with an opportunity to buy BOMB token back

Multi-level referral system

Variable Jackpot Pool

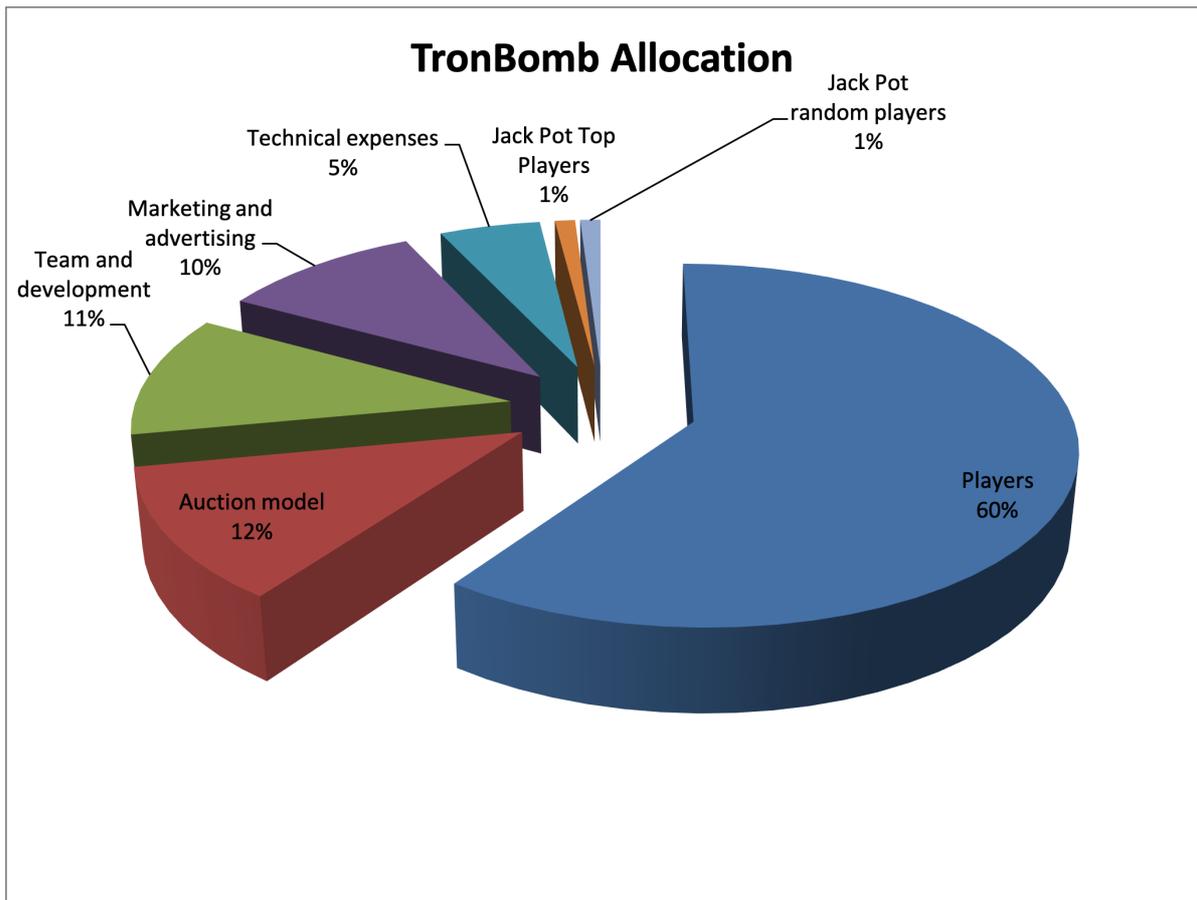

The Tronbomb.com project token has TRC-20 format. The main purpose of issuing BOMB token is a fair distribution of the platform profits and fair functioning of the dividend system. Due to the fact that project tokens can only be obtained while playing on the platform, we protect the project from any manipulating by third-party investors and from concentrating the token for unfair use. Platform profits will be equally distributed among all token holders through a smart contract.

DIVIDENDS

Dividends from the dividend pool are paid every 24 hours to all platform users at every level. Payments are made in the TRX cryptocurrency thanks to the smart contract system. Each user has an opportunity to receive dividends by fulfilling a set of conditions.

The main thing is to freeze BOMB tokens on tronbomb.com platform. Payments will occur in proportion to the number of frozen tokens. The process of paying dividends is carried out every 24 hours. In the “Dividends” section, the user will be able to see at what stage the payment process is at the moment. Thanks to such a payment system, an equitable distribution of dividends among all participants of the platform is achieved. The TronBomb team receives rewards in the form of tokens and dividends only if the project and its development are successful.

GAMES

The most popular game in all DApps is **DICE**. It is a simple and dynamic game with instant wins and results to the player.

A user needs to select a number from 0 to 77 and predict the number, indicating more, less or equal to the result of the previous draw. At the same time, the smallest number is zero, and the largest is 77. Depending on the selected digit and the player's bet, the payout ratio of the player changes to equal or greater. The player always sees the payout amount and the multiplication rate of the bet before each hand.

The minimum bet in the game is 10 TRX, and the maximum - 20,000 trx.

The percentage of platform retention in DICE is 2.25%, thanks to which the dividend pool is formed.

The project team aims to develop multiplayer games. And the first multiplayer game is **Gear of Fortune**. The Gear of fortune is a reel, divided into sectors, and is a simplified version of roulette. Players make bets at the same time and can watch the bets of other users. The draw occurs every 60 seconds.

ADVERTISING AND PROJECT PROMOTION

- **TronBomb is to launch a large-scale advertising campaign in social networks**

Information about the project will attract users from all over the world through popular social networks and messengers, such as Facebook, Twitter, Instagram, Telegram, WeChat, KakaoTalk, etc.

- **Posting of articles about the project and banner advertising**

To expand the audience of the platform, information on the project and its development news will be regularly posted on cryptothematics media resources, as well as resources devoted to online games and entertainment.

- **Bounty campaign**

To form and strengthen the TronBomb community, as well as to achieve maximum media coverage, the platform launches a reward campaign for participants who post information about the project on social networks, forums, news portals and websites. Take part in the Bounty campaign, promote TronBomb and get rewards!

- **Video advertising and promotional materials**

This advertising campaign includes posting of promotional videos on the most popular video resources: YouTube, Instagram, YouKu, etc.

- **Integration with mobile wallets**

Mobile devices are increasingly popular for storing cryptocurrencies and mutual settlements between users. For the convenience of players, the TronBomb platform will be integrated with popular mobile wallets such as Tron Wallet, Math Wallet, Huobi wallet, Banko wallet, etc.

- **Placing a project token on crypto exchanges**

To attract the community of traders and the ability of users of the TronBomb platform to exchange and withdraw received tokens, the tokens will be listed on popular decentralized exchanges of the blockchain TRON, as well as crypto exchanges recommended and offered by the community.

ROADMAP

October 11, 2019 Launch of the TronBomb Platform on TRON
October 2019 JackPot for TOP Players
November 2019 JackPot for Random Players
November 2019 Auction System
November 2019 BOMB Tokens games
December 2019 Unique PVP game "To the moon"
January 2020 Launch of the TronBomb platform on EOS
February 2020 Launch of the TronBomb platform on TON
March 2020 Adding new games
April 2020 Association of the platforms TRON, EOS, TON
2020 Globalization of the platform

POSSIBLE RISKS
